

The Facts about the Proposed Landfill: Second in a Series
A Safe, Cost-Effective
Solution -
An Environmental Landfill

Scotland County can build an environmentally safe, economical and long-term option for disposal of its Municipal Solid Waste. A Municipal Solid Waste Landfill is a facility built for the permanent disposal of non-hazardous solid wastes generated by homes, businesses and industries. This facility will benefit Scotland County for at least thirty years.

Federal and state regulations mandate, a modern landfill includes the use of protective liners and liquid collection systems, surface water management, groundwater monitoring, advanced technology to manage methane, and final caps along with long-term monitoring of the facility after closure.

Waste Management is offering its expertise to build this modern landfill. The company is a national leader in waste disposal with more than 20 years operational experience in North Carolina. In addition to its 283 active landfills properties, Waste Management operates 131 recycling plants, 370 transfer stations, 17 waste-to-energy plants, 95 beneficial-use landfill gas projects, and more than 400 hauling companies throughout the United States and Canada.
