

**The Facts about the Proposed Landfill: Fourth in a Series**  
**Waste Management –**  
**A Proven Partner**

Scotland County needs long-term solid waste disposal services. Industry leader Waste Management is offering its expertise to build Scotland County a state-of-the-art modern landfill to address these needs.

Scotland County could continue shipping its wastes to other counties, which is likely to become increasingly difficult and costly, in coming years. Or, the County can build a landfill by itself, which will be far more expensive and will not provide the income and benefits as one in partnership with an industry professional like Waste Management.

Waste Management adheres to the industry's highest standards for landfill design, construction and operation. The proposed Scotland County landfill would be designed and built to meet or exceed all of the environmental safety standards established in 1991 by the U.S. Environmental Protection Agency for non-hazardous modern landfills.

The company has the proven experience to operate the Scotland County landfill in accordance with federal and state regulations.

Waste Management, with more than 20 years in North Carolina, operates 283 active landfill properties, 131 recycling plants, 370 transfer stations, 17 waste-to-energy plants, 94 beneficial-use landfill gas projects, and more than 400 hauling companies throughout the United States and Canada.
